Abstract

This is a very simple example document for STEP 2008, prepared using L^AT_EX. We give general instructions on how to prepare your documents, and information on how to include tables, figures and bibliographical references.

1 Introduction

This is an example document for STEP 2008. Submissions to STEP 2008 should be in Adobe PDF format, not exceed eight A4 pages, in two columns (preferably) and be typeset in an 11pt font (as in this document). More information can be found in the file `step2008.sty`.¹ PDF files can be generated directly using the `pdflatex` command — this PDF file was produced by the command `pdflatex example`.

2 Tables and Figures

Tables and figures can be included in the text in the usual way. An example of a table is illustrated in Table 1, and a figure in Figure 1. Note that table captions are on top of the tables, whereas figure captions are placed below the figures.

Table 1: An example of table.

Blib	Blab	Result
Flop	Flip	1,200
Flip	Flop	200
Flip	Flip	300
Flop	Flop	3,300

One convenient way to include pictures (as Figure 1 does) is by making use of the `graphicx` package and the `\includegraphics` command.

3 Citations

The file `step.bst` is used for bibliographical references. An example file with bibitems is

¹The stylefiles are based on those used for the COLING and ACL conferences.

Figure 1: An example of figure.

`example.bib`. An example citation, using `\cite` is (Author and Else, 1983). Another example citing only the year is Author et al. (1983), generated with the `\shortcite` command.

4 Other Stuff

This paragraph is not particularly interesting because it is repeated over and over again to show the length and width of the two columns on the page. Note that there are no page numbers. This paragraph is not particularly interesting because it is repeated over and over again to show the length and width of the two columns on the page. Note that there are no page numbers.
